Birds Around the State: January - December 1982

Compiled by Jerome A. Jackson

Department of Biological Sciences
Mississippi State University
Mississippi State, Mississippi 39762

The following is a summary of noteworthy bird sightings in Mississippi for the period 1 January through 31 December 1982. The sequence of information in each account is: species, number, date, place, observer(s). Numbers of birds sighted are underlined. The significance of sightings is indicated by a letter in parentheses following a record. These letters are as follows: (A) = arrival date, (D) = departure date, (E) = early date, (L) = late date, (N) = unusually large number, (R) = species rare in area. Other abbreviations used include the following: m = male, f = female, imm = immature, ad = adult, pr = pair, pl = plumage, CBC = Christmas Bird Count, BBS = Breeding Bird Survey of the U.S. Fish and Wildlife Service, NWR = National Wildlife Refuge, PRM = Pascagoula River Marsh. The list of sightings is followed by keys to observers' initials and new or unusual localities mentioned. Localities that have been frequently cited in past issues of "Birds Around the State" and identified in previous keys may not be included in the present key.

Contributions of records are welcome from anyone who makes observations of Mississippi birds. Only with the assistance of many individuals from throughout the state over a period of years can we come to understand the dynamics of the bird populations of Mississippi. Contributors should submit records on 3 X 5 inch cards or similar sized slips of paper with the following information: species, number seen, date (including year), location (county and distance and direction from nearest town), observer(s), and details and significance of observation. While records are welcome at any time, those received by 15 March, 15 June, 15 August, and 15 December will be submitted with the seasonal report to American Birds as well as being considered for use in the Mississippi Kite
